

The International Probiotics Association takes quality very seriously therefore it has established voluntary guidelines of what probiotic supplement products should have on their label:

- 1) CFU count at the time of expiration (guaranteed minimum) of the product
- 2) Storage directions
- 3) Lot number or production code should be on every package
- 4) A clear identification of the probiotic bacteria including the strain (preferred) or at least the genus and species based on widely accepted nomenclature. If a Trademarked name is used to identify the bacteria, the actual genus and species should also be included on the label. This information gives consumers the knowledge and chance to research the strains.
- 5) Contact information for the company including an address and a telephone number that consumers can call if they have any questions or concerns. For products that don't have enough space on the label a company should list a website where the consumer can go and get that information
- 6) Directions for suggested usage (animal probiotic supplements should include target animal species)
