DAY 1

Wednesday November 2, 2022

1:00 – 1:40

Camille Binachon

Product Manager at Lallemand Health Solutions

Bio

Camille Binachon graduated as an engineer in biotechnologies and got the chance to focus her studies on marketing in biosciences. She started her career in the medical devices field, specifically on digestive health. Then, she discovered the world of probiotics and joined Lallemand Health Solutions 3 years ago as product manager, specialized in metabolic health and oral health.

Company

Lallemand Health Solutions is a vertically integrated probiotic manufacturer specialized in the research, development, production and marketing of probiotic yeast and bacteria. It's ready-to-market and custom probiotic formulations target specific populations and health segments, including gut health, immune health, mental health, women's health, skin health, oral health, metabolic health, and sport. From lab to shelf, Lallemand Health Solutions has the full control and expertise to produce premium probiotic solutions, blends and custom formulations in cutting-edge plants certified to the highest quality.

L. rhamnosus HA-114 supports weight management efforts, a breakthrough clinical study

Abstract

L. rhamnosus HA-114, a unique patent pending probiotic, was recently documented to support weight management efforts in overweight adults during a weight reduction program. In this recent clinical study, *L. rhamnosus* HA-114 was shown to positively impact eating behaviors such as binge eating or cravings. Moreover, *L. rhamnosus* HA-114 improved mood behaviors and was shown to promote a healthier metabolic phenotype in participants. These breakthrough results demonstrate *L. rhamnosus* HA-114's positive impact on behavior by promoting a well-balanced brain-gut axis communication to support weight management efforts.

Key Elements

- A unique patent pending probiotic clinically documented to support your weight management efforts.
- One capsule per day of 10B CFU *L. rhamnosus* HA-114 positively impacts behavioral and psychological traits and promotes a healthier metabolic phenotype in overweight individuals during a weight reduction program.
- Following the results of this breakthrough clinical study, this strain recently gained innovative indications from Health Canada, recognizing its beneficial impact to support people's efforts when engaged in a weight management program.
